

OXOCARD CONNECT CARTRIDGE SPECIFICATION

Specifications

The Oxocard Connect can be powered externally via the USB socket or via VEXT. When operating via VEXT, ensure that the voltage is between 4.5VDC and 6.0VDC and that the current supplied is at least 1A. VCC and VDD are output voltages generated by the Oxocard Connect and can also be used for the cartridge. Please note that the common current does not exceed 500mA.

The voltage of VCC is 4.7VDC if the Oxocard Connect is supplied via the USB interface.

If the Oxocard Connect is operated via VEXT, the voltage depends on VEXT as follows:

$$VCC = VEXT - 0.3VDC$$

The voltage VDD is 3.3VDC.

Please note that all specified voltages depend on the current
